Department Of Computer Science

MCA - III

Subject: Enterprise Java Technologies

Practical Assignment – 4

DATE : 1-10-2026 SUBMISSION DATE : 15/10/2026

1. Create a JSP page to accept student details such as Student ID, Student Name, Course, Semester and Email, and display the submitted information on another JSP page.

2. Create a JSP page that accepts five subject marks and calculates the total, percentage and grade.

3. Create a JSP application to accept a number and display whether the number is even, odd, prime or not prime.

4. Create a JSP page that demonstrates the use of JSP declaration, scriptlet and expression tags.

5. Create a JSP application to demonstrate the use of the following implicit objects:

- request
- response
- session
- application
- out

6. Create a JSP application that accepts username and password and displays a personalized welcome message using the request object.

7. Create a JSP application that stores the logged-in user's username in a session and displays it on multiple JSP pages.

8. Create a JSP application using include to display a common header and footer on multiple JSP pages.

9. Create a JSP application using the JSP forward action to transfer a request from one JSP page to another.

10. Create a JSP page that uses JavaBean properties to accept and display student information.

11. Develop a JSP-based Student Result System that accepts marks of five subjects and displays:

- Total Marks
- Percentage
- Grade
- Pass/Fail Status

Use separate JSP pages for input and result.

12. Develop a JSP-based Login System using session management. After successful login, display a dashboard containing the username and provide a logout facility.

13. Create a JSP application to demonstrate session tracking using:

- Cookies
- HttpSession
- URL Rewriting

14. Develop a JSP application that retrieves student records from a database using JDBC and displays them in an HTML table.

15. Create a JSP application to perform CRUD operations on an Employee table using JSP and JDBC.

16. Create a JSP application that displays employee details based on a department selected from a dropdown list.

17. Create a JSP page that uses Expression Language (EL) to display request parameters without using JSP scriptlets.

18. Create a JSP application using EL to display values stored in:

- Request scope
- Session scope
- Application scope

19. Create a JSP page that demonstrates EL operators for:

- Arithmetic
- Relational
- Logical
- Conditional

20. Create a JSP application that uses EL to access properties of a JavaBean containing:

- Student ID
- Student Name
- Course
- Semester

21. Create a JSP page using EL to display values from a Java List and Map.

22. Create a JSP application that uses EL to check whether a user is logged in and conditionally displays the user's dashboard or login message.

23. Develop a JSP application that accepts two numbers and performs arithmetic operations using EL instead of scriptlets.

24. Create a JSP application using JSTL <c:if> to determine whether a student has passed or failed based on percentage.

25. Create a JSP application using JSTL <c:choose>, <c:when> and <c:otherwise> to display grades based on student marks.

26. Create a JSP application using JSTL <c:forEach> to display a list of students in an HTML table.

27. Create a JSP application using JSTL <c:forEach> to display employee records retrieved from a database.

28. Create a JSP application demonstrating JSTL <c:set>, <c:remove> and <c:out>.

29. Create a JSP application using JSTL and EL to display product information stored in a collection. Display:

- Product ID

- Product Name
- Quantity
- Price
- Total Price

30. Develop a Student Result Management System using JSP, JSTL and EL. The application should:

- Accept student details and marks
- Calculate total and percentage
- Determine grade
- Store student information in appropriate scope
- Display the result using JSTL and EL
- Avoid JSP scriptlets in the result page

31. Develop an Employee Management System using JSP, JSTL, EL and JDBC with the following operations:

- Add Employee
- Display Employee
- Search Employee
- Update Employee
- Delete Employee

32. Develop a Product Management System using JSP, JSTL and EL. Retrieve product records from a database and display them using <c:forEach> and EL.

33. Create a JSP-based Login and Logout System using JSTL and EL. Use session scope to maintain the logged-in user and prevent access to the dashboard after logout.

34. Develop a JSP application that retrieves records from a database and uses JSTL <c:forEach>, <c:if> and EL to display records conditionally.

35. Develop a College Student Management System using JSP, JSTL, EL and JDBC. The system should provide:

- Student Registration
- Student Login
- Student List
- Search Student
- Update Student
- Delete Student
- Session Management
- Logout
